Abstract

Purpose – Prior studies have found evidence for the role of political instability on foreign divestment (FD) where a high level of instability encourages FD decisions. Therefore, this paper aims to examine how the food security level explains the linkage between political instability and FD.

Design/methodology/approach – The current study adopts the system generalised method of moment (GMM) to achieve accurate and reliable empirical evidence for 60 developing countries in the period 2011 to 2020.

Findings – The results demonstrated a negative and significant relationship between political instability and FD on food security. This suggests that political instability's impact on divestment tends to be lower in countries with better levels of food security. Other controlled variables, such as economic growth, human capital and trade openness, also have a negative effect on FD, discouraging FD.

Practical implications – As a result, policymakers could take steps to ensure that food security levels reach acceptable levels, as food security has been linked to a country's political stability.

Originality/value – To the authors limited knowledge, no studies have looked at the relationship between political instability and food security in determining a country's FD. Our study aims to analyse this issue because the current global crisis, which is being caused by high food prices, will push millions of more people into severe poverty and exacerbate hunger and malnutrition.

1. Motivation

As political instability is relatively high and expected to rise globally, the effect of political stability on foreign divestment (FD) has been one of the most highly debated areas of research. Verisk Maplecroft, a risk consultant, has stated that the pandemic's fallout causes many countries to become more unstable, predicting that developed and developing countries will encounter more political instability by 2023 (Matthew Mashiri, 2022). A few studies have been conducted on the relationship between political stability and FD, where political stability encompasses corruption, institutional strength and the rule of law (Nishimura and Liu, 2016; Hasan *et al.*, 2017; Nguyen, 2019; Kamnouch *et al.*, 2020; Loukil *et al.*, 2021; Nguyen *et al.*, 2022). It, therefore, investors are more cautious when choosing foreign direct investment (FDI) destinations. For instances, poor institutions, the rule of law and a lack of accountability,
