, 2011-11 **Exploring the Food Chain** Yves Segers, Jan Bieleman, Erik Buyst, 2009 Until the late 19th century the food industry was restricted to a few activities usually based on small scale industries The links between agriculture and food processing were very tight Due to increased purchasing power population growth and urbanisation the demand for food grew substantially This was not only the case for basic products as corn and potatoes but also and especially for more expensive quality products as meat fish and dairy produce These developments generated together with the essential technological innovations the creation and development of modern food processing in specialized shops and factories In only a few decades these industries transformed from an important complement to the primary agricultural production on the farms to a much comprising industrial business At the end of the 20th century food processing has evolved into a modern high tech industry dominated by a few large enterprises offering a wide range of products This volume aims to turn the spotlight on this often neglected but important link in the food chain **Food Processing**, 1992 **Panorama of EU Industry 1997.
