In addition to the ten invited presentations and the public lecture, we had more than 240 talks in nine minisymposia and forty-four sessions of contributed talks, and about 316 participants from all over the world, specially from Europe. A total of 98 contributions appear in these proceedings. Topics include theoretical aspects of new numerical techniques and algorithms, as well as to applications in engineering and science. The book will be useful for a wide range of readers, giving them an excellent overview of the most modern methods, techniques, algorithms, and results in numerical mathematics, scientific computing, and their applications. We would like to thank all the participants for the attendance and for their valuable contributions and discussions during the conference. Special thanks go to the minisymposium organizers who made a large contribution to the conference, the chair persons, and all speakers.
