### FSU 2103: Critical and Creative Thinking

#### Introduction

Many great breakthroughs and discoveries in art, science and innovation have resulted from combining creative and critical thinking skills. Approaches differ considerably between the skills used in creative thinking and those used in critical thinking. However, it is because of the interaction created by the combination of both sets of skills that they are being discussed in conjunction with one another in this unit. By applying creative and critical thinking approaches to your subject area you will enrich and deepen your learning experiences. Furthermore, creative and critical thinking skills can benefit many other areas of your life from problem solution to decision making.

The developments of creative and critical thinking are complementary, and both encourage independent and student-centred learning (Fisher, 1990). But what exactly do we mean when we talk about creative and critical thinking? When and why did these terms come into prominence in modern education, and how can we encourage these types of thinking?

"Critical thinking" is defined in many different ways, with no universally agreed definition (Brookfield, 1987; Cassel & Congleton, 1993) and in the same way, the term "creativity" is so widely used that there are diverse definitions (Lucas, 2001; Cropley, 2001) – which may in part be because researchers admit that we cannot yet fully explain the creative power of the brain (Sternberg, 1999).

#### Definition of Critical Thinking and Creative Thinking

##### Nature and Scope of Critical Thinking

##### What is Critical Thinking?

Many scholars have defined critical thinking in different ways. In our discussion we define critical thinking as 'purposeful self-regulatory judgment', which manifests itself in giving reasoned consideration to the evidence, methods and conceptual structures within which a decision is made about what to believe or what to do.

The key characteristics of critical thinking are both inductive and deductive reasoning, problem-solving, and 'reflective skepticism' (Tiwari, Chan, Sullivan, Dixon & Tang, 1999.) A successful critical thinker should be able to analyse and evaluate major alternative points of view, to explain assumptions and reasons and to identify salient arguments (Facione & Facione, 1994).

Encouraging students to think critically involves, among other things, helping them to distinguish opinions from facts, to evaluate evidence, and to avoid shallow and illogical thinking. This approach is very important in helping to avoid (by recognizing) manipulation, which in turn can allow intellectual independence and creativity to flourish (Browne & Keely, 1993; Mayfield, 1997; Paul, 1995).
