

Encyclopedia of Well Logging

R. Desbrandts

Graham & Trotman Ltd./Ed. Technip; 1985; ISBN 0-86010-709-4; 584 pp. Price: £81.00/\$150.00

The Shorter Oxford English Dictionary defines the word 'encyclopedia' as: 'A work containing exhaustive information on some one art or branch of sciences, arranged systematically'.

This definition suggests that such a work is comprehensive and essentially consulative. Indeed, in his preface the author introduces his work as '... a manual covering all well-logging measurements ... for ... students, trainees and engineers ...'. A major function of this Review is to report how closely Desbrandts' work reflects the scope and ordering that are implicitly claimed in the title.

The book comprises sixteen chapters preceded by glossaries of symbols and abbreviations. The symbols essentially represent relevant formation-evaluation parameters. This list is long but there are some noteworthy exceptions. I could not find 'resistivity index', for example. Furthermore the symbol definitions are not accompanied by units where appropriate. The abbreviations include logging company acronyms for their tools or related services. This compilation acknowledges trademarks of four major logging companies but a fifth, Gearhart Industries, has not been included. Despite the apparent omissions these reference glossaries are more comprehensive than most.

Each of the sixteen chapters includes a reference listing. The references are ordered in a manner which corresponds broadly, but not exactly, to the subdivisions of the text itself. The reference lists are adequate but by no means exhaustive. Although credit is given to the technical contributions of all the major service companies, the references reflect key omissions, e.g. the contribution of Welox in the chapter references on nuclear well logging.

The first chapter deals with 'well logging during drilling'. This is the second-largest chapter (82 pp); it covers measurements using drilling mud, measurements on cuttings, measurements relating to drilling, downhole measurements, field implementation, and interpretation and use of the results. Of these 82 pages only one paragraph is dedicated to the measurement of formation characteristics. The brevity of that discussion, which is also service-company specific, does not convey the significance of this vital bridgehead between MWD and wireline well logging. In general, however, the subject treatment is more exhaustive than one would customarily find in a text on well logging.

Chapter 2 deals in preliminary fashion with generalized aspects of logging and log interpretation. This is followed by three chapters on the measurement techniques themselves, electric and dielectric well logging, nuclear well logging, and acoustic well logging. Each chapter deals with measurement principles and practice, and with sonde calibration. Of the sixty-four figures in Ch. 3-5 over half are directly extracted from the commercial literature of one service company. There is a proliferation of that same service company's acronyms. The book scores in its treatment of high-technology tools such as induced gamma spectral logs which is much more comprehensive than competing texts. Ch. 6 deals with miscellaneous logs and measurements which do not easily fit into the thematic chapters, e.g. dipmeter, VSP, borehole gravimetry and temperature logs. However, the treatment of each is cursory. For example, the description of the caliper does not even describe how such a tool actually works. Ch. 7 rounds off the treatment of wireline measurement technology by reviewing recording techniques. This chapter would be more appropriately entitled 'Recording techniques as practised by Schlumberger'. Every single example is taken from Schlumberger's commercial literature, with only a solitary passing mention of three other logging service companies one

of whose names has even been incorrectly stated.

Chapter 8 deals with basic formation evaluation. This is the longest chapter (99 pp.) and it addresses manual-, field- and computerized-interpretation, cased- and empty-hole evaluation, facies determination, reservoir description and over-pressured zones. This treatment is forward-looking but again there is a very heavy inclusion of commercial elements. Shaly sands are dealt with in some detail. Here, as elsewhere in the chapter, the style of presentation facilitates easy reference.

The book gains strongly from Ch. 9 onwards when it addresses subjects that I have not seen described collectively elsewhere in a logging text. A chapter on sidewall coring and fluid sampling is followed by one on wireline completion operations. Ch. 11 deals with production logging by describing tools such as flowmeters and temperature logs, and interpretation methodologies encompassing continuous flow-meter calibration, two phase flow and inflow well performance. Ch. 12 comprises a novel treatment of logging in relief wells.

Chapters 13 and 14 address logging for non-hydrocarbon purposes (geothermal, mining, groundwater and civil engineering) as well as for the shallow petroleum resources of tar sands and oil shales. Geothermal receives the greatest attention; other treatments are superficial.

Chapter 15 deals with logging in oil muds encompassing mud logging, MWD and wireline well logging. The final chapter describes the design and cost of MWD, wireline and production logging programmes.

The text is followed by Appendices on physical constants, etc., literature sources, graduate schools where logging is taught, and a five-language glossary of logging terms. Finally there is an author index and subject index.

In general, the book is more comprehensive in its treatment of logging matters than many competing texts. The scope is very broad indeed with the word 'logging' being taken to include mud logging, MWD, production logging and non-hydrocarbon applications, as well as wireline logging for petroleum. This has resulted in the treatment of some wireline topics being rather superficial. Furthermore, the work leans heavily towards the nomenclature, *modus operandi* and technical publications of the major wireline logging contractor, Schlumberger. While understandable up to a point, this leaning has been overdone. For example, in Ch. 2-8, which deal directly with wireline logging, many of the text figures are extracted directly from the Schlumberger commercial literature which is already freely available to the industry. Perhaps as a consequence of this selectivity, the bibliography contains some noteworthy omissions.

My conclusion is that while the ambitious title word 'encyclopedia' is not justified, the book remains a useful compendium of the downhole measurements area. It is a reference text rather than a definitive one. The book's strengths are the forward-looking integrated treatment of the different facets of downhole measurements and the inclusion of high-technology logging tools which are becoming increasingly used in the industry. In general, the scope and treatment of the subject matter are sufficiently distinctive to justify its purchase by those concerned with downhole measurements in applied earth science and in the exploration and production of both petroleum and non-hydrocarbon mineral sources.
