Roggenbach, Antonio Cerone, Bernd-Holger Schlingloff, Gerardo Schneider, Siraj Ahmed Shaikh, 2022-06-22 Software programs are formal entities with precise meanings independent of their programmers so the transition from ideas to programs necessarily involves a formalisation at some point The first part of this graduate level introduction to formal methods develops an understanding of what constitutes formal methods and what their place is in Software Engineering It also introduces logics as languages to describe reasoning and the process algebra CSP as a language to represent behaviours The second part offers specification and testing methods for formal development of software based on the modelling languages CASL and UML The third part takes the reader into the application domains of normative documents human machine interfaces and security Use of notations and formalisms is uniform throughout the book Topics and features Explains foundations and introduces specification verification and testing methods Explores various application domains Presents realistic and practical examples illustrating concepts Brings together contributions from highly experienced educators and researchers Offers modelling and analysis methods for formal development of software Suitable for graduate and undergraduate courses in software engineering this uniquely practical textbook will also be of value to students in informatics as well as to scientists and practical engineers who want to learn about or work more effectively with formal theories and methods Markus Roggenbach is a Professor in the Dept of Computer Science of Swansea University Antonio Cerone is an Associate Professor in the Dept of Computer Science of Nazarbayev University Nur Sultan Bernd Holger Schlingloff is a Professor in the Institut für Informatik of Humboldt Universität zu Berlin Gerardo Schneider is a Professor in the Dept of Computer Science and Engineering of University of Gothenburg Siraj Ahmed Shaikh is a Professor in the Institute for Future Transport and Cities of Coventry University The companion site for the book offers additional resources including further material for selected chapters prepared lab classes a list of errata slides and teaching material and virtual machines with preinstalled tools and resources for hands on experience with examples from the book The URL is <https://sefm-book.github.io>

which the papers have been collected is Concurrency Compositionality and Correctness reflecting the focus of Willem Paul de Roever's research career. Topics addressed include model checking, computer science and state machines, ontology and mereology of domains, game theory, compiler correctness, fair scheduling and encryption algorithms. **Automata, Languages and Programming** J. Loeckx, 2013-12-14. The Second Colloquium on Automata Languages and Programming is the successor of a similar Colloquium organized by IRIA in Paris July 3-7 1972. The present Colloquium which takes place at the University of Saarbrücken from July 29th to August 2nd 1974 is sponsored by the Gesellschaft für Informatik and organized in cooperation with the Special Interest Group on Automata and Computability Theory SIGACT and with the European Association for Theoretical Computer Science EATCS. As its predecessor the present Colloquium is devoted to the theoretical bases of computer science. This volume contains the text of the different lectures of the Colloquium which have been selected by the Program Committee out of about 130 submitted papers. About one third of the papers of this volume is concerned with formal language theory, one other third with the theory of computation and the rest with complexity theory, automata theory, programming languages, etc. *Library of Congress Catalogs* Library of Congress, Laboratory for Computer Science Progress Report Massachusetts Institute of Technology. Information Processing, 1977. *Lectures on the Curry-Howard Isomorphism* Morten Heine Sørensen, Pawel Urzyczyn, 2006-07-04. The Curry-Howard isomorphism states an amazing correspondence between systems of formal logic as encountered in proof theory and computational calculi as found in type theory. For instance, minimal propositional logic corresponds to simply typed lambda calculus, first order logic corresponds to dependent types, second order logic corresponds to polymorphic types, sequent calculus is related to explicit substitution, etc. The isomorphism has many aspects even at the syntactic level: formulas correspond to types, proofs correspond to terms, provability corresponds to inhabitation, proof normalization corresponds to term reduction, etc. But there is more to the isomorphism than this. For instance, it is an old idea due to Brouwer, Kolmogorov and Heyting that a constructive proof of an implication is a procedure that transforms proofs of the antecedent into proofs of the succedent. The Curry-Howard isomorphism gives syntactic representations of such procedures. The Curry-Howard isomorphism also provides theoretical foundations for many modern proof assistant systems, e.g. Coq. This book gives an introduction to parts of proof theory and related aspects of type theory relevant for the Curry-Howard isomorphism. It can serve as an introduction to any or both of typed lambda calculus and intuitionistic logic. Key features: The Curry-Howard Isomorphism treated as common theme. Reader friendly introduction to two complementary subjects: Lambda calculus and constructive logics. Thorough study of the connection between calculi and logics. Elaborate study of classical logics and control operators. Account of dialogue games for classical and intuitionistic logic. Theoretical foundations of computer assisted reasoning.
